JUNIOR JAVA DEVELOPER

ABOUT US

We are data science start-up that combines thirty years of investment decision making with Vietnam's technologically talented labor pool.

Our mission is to provide affordable, tailored forecasting solutions by mining existing and newly captured data with machine learning algorithms. We strive to remove – "debias" – the human analytic element and its inherent biases, from our solutions.

Our clients include US and Europe based market leaders in alternative data.

RESPONSIBILITIES

As Junior Java Developer on our product team, you will develop, test & maintain new modules for our data mining system as below:

- Transform requirements into programming code, with activities ranging from estimating the time needed, designing, coding, maintaining, testing, debugging.
- Identify the risks, dependencies of the tasks he/she oversees, and actively participate in reducing both.
- Communicate actively, directly about the tasks assigned to leaders/team members. Have a proactive attitude towards searching and distributing information.
- Respect processes and development standards. Notably participates to various Scrum meetings.
- Develop proper unit tests for the tasks he/she is in charge of.
- Estimate the tasks he/she is in charge of and deliver on time products that respect the quality standards.
- Self-train to keep up to date with new technologies.
- Ideally, the Developer is aware of advanced topics such as bottleneck determination and performance optimization.
